WEDNESDAY FEATURE | SMART HOME ENTERTAINMENT

One projector. More ways to use the room.

The Dangbei N3 Max makes a large-screen experience easier to place in Canadian homes. Its built-in rotating stand, automatic image setup and licensed streaming give resellers a practical story to show, not just a list of specifications.

DANGBEI N3 MAX | MPN N3-Max

1080p	1,000 ISO	180°	VIDAA
NATIVE FULL HD	**RATED BRIGHTNESS**	**ROTATING STAND**	**STREAMING BUILT IN**
Clear picture detail for films, shows and casual gaming.	A manufacturer rating best suited to controlled light.	Aim at a wall or ceiling without a separate stand.	Licensed Netflix and other compatible apps.

Start with the room

A family room is not always arranged around a blank wall. In a bedroom or condo, there may be even less space for a permanent screen. The N3 Max can move between those settings: its integrated gimbal changes the projection angle, while automatic focus and image correction help make setup simpler.

That flexibility is the useful customer story. The projector has a native Full HD picture; it can decode 4K content, but it does not project native 4K. Its 1,000 ISO lumen rating makes it a stronger fit for evening viewing or rooms where daylight can be controlled than for a brightly lit boardroom.

What a reseller can demonstrate

- Show a wall-to-ceiling change in a real room and let customers judge placement for themselves.
- Open VIDAA and explain that Netflix is licensed on the device; subscriptions are still required.
- Ask about room light, viewing distance, sound expectations and the intended screen size before recommending it.

Why feature it this week

Dangbei identified the N3 Max as a priority for the Canadian reseller network. Randmar has current Laval inventory and approved English and French assets to support a focused product page, email or in-store demonstration. This edition gives resellers a room-based selling approach that complements our earlier introduction to the model.

Ask before you recommend

- How much daylight can the room control?
- Is the preferred image on a wall, screen or ceiling?
- What viewing distance and sound setup will the customer use?

Three signals make this timely

PRIORITY MODEL	AVAILABLE IN LAVAL	APPROVED ASSETS
Dangbei asked Randmar to begin its Canadian reseller work with the N3 Max.	The active product record currently shows inventory at Randmar.	English and French materials support a credible reseller launch.

RANDMAR ANGLE	Lead with a room the customer recognizes: a family space, condo or bedroom where a permanent television is not ideal. Demonstrate placement and ease of setup, then confirm current availability, price and approved assets through Randmar before quoting or advertising.
