THURSDAY UPDATE | CANADIAN GROWTH

From Quebec success to a national opportunity: meet RAKABOT.

RAKABOT has built a strong story in Quebec by solving a familiar Canadian problem: wet, muddy footwear and crowded entrances. The next opportunity is to bring that practical Canadian innovation to workplaces, healthcare environments, schools, municipalities and homes across the country.

QUEBEC	PATENTED	4 RANGES	IN STOCK
PROVEN FOUNDATION	**WATER MANAGEMENT**	**A SOLUTION FOR EACH SPACE**	**AVAILABLE FROM RANDMAR**
A strong home-market story ready to travel across Canada.	Designed to collect the snowmelt, mud and grit carried indoors.	Locker, Signature, Titan and Zeus support different environments.	Selected products are available from Canadian inventory.

A Canadian problem with a Canadian answer

Most shoe racks store footwear, but they do not manage what drips from it. RAKABOT rethought the entrance around Canadian conditions, using angled storage and collection systems to help contain water, salt, dirt and debris while keeping footwear organized above the mess.

Start with the environment, then build the solution

- **Locker:** compact, stackable storage for individual users, employee areas and smaller facilities.
- **Signature:** a refined option for reception areas, offices and residential entrances.
- **Titan:** higher-capacity commercial storage for clinics, schools, municipalities and workplaces.
- **Zeus:** mobile coat-and-footwear storage for flexible, high-traffic shared spaces.

Ask the questions that uncover the project

How many people arrive with outdoor footwear? Where are wet shoes and boots stored today? Is the customer managing an entrance, locker room, clinic, office or public facility? How much capacity and floor space are available? These questions turn a product request into the right footwear-management solution.

LOCKER	Compact two-tier storage; 447 units currently available across Laval and Edmonton.
SIGNATURE	Stainless steel and black two-tier system storing up to seven pairs; 14 units currently available in Edmonton.
TITAN	Commercial two-tier stainless steel and white system storing up to ten pairs; 12 units currently available across Laval and Edmonton.

Where the story travels next

CORPORATE	HEALTHCARE	EDUCATION	MUNICIPAL
Employee entrances and locker areas	Clinics, pharmacies and dental offices	Schools, daycares and shared facilities	Public buildings and recreation spaces

Why RAKABOT is ready for broader Canadian growth

RAKABOT already has the most important ingredient: a clear problem-and-solution story supported by real success in Quebec. Randmar and its reseller community can now bring that story to corporate, healthcare, education, municipal and e-commerce customers in every province.

RANDMAR ANGLE	Do not position RAKABOT as simply another shoe rack. Position it as a Canadian-developed footwear-management solution for organizations dealing with wet shoes, limited space and busy entrances.
